Backend developer

I am MEGDAD Imed, a computer science student in the fifth year of my studies. Throughout the years, I have explored various areas within the field and worked on different projects, each offering its own set of challenges and lessons. Among the different paths, backend development has consistently drawn my attention. More recently, I have also started exploring deep learning, a field that is increasingly shaping the future of technology. I am currently seeking opportunities that allow for continued growth, quiet learning, and the gradual improvement of practical skills.

WORK EXPERIENCE

Thynk Tech

Algers • 07/2024 - 09/2024

Backend developer • Internship

Contributed to the backend development of "Auto-View," a web application aimed at supporting HR professionals in handling job applications.
